

Ozoloc Adhesive Instructions

Ozoloc Repair adhesive is a specially formulated adhesive to be used in repairing and reinforcing the bond of the Ozoloc Plank and Tile adhesive strip. Special care should be taken to use the adhesive properly. Avoid skin and eye contact and use with proper ventilation. Please follow instructions on bottle for First Aid and Storage.

The adhesive should be applied in a steady bead in the middle of the Ozoloc strip from top to bottom of strip, being careful not to get any on the edge so it will bleed on to the surface of the tile. If any adhesive gets on the Plank or Tile surface it needs to be immediately removed with a wet rag before it dries or it will not be able to be removed without damaging the plank or tile.
